Data protection and IT security Are your resources sufficient?

The topics of data protection and information security have a high and permanently growing importance for companies. Corporate knowledge is often the most valuable asset that must be secured against theft. In addition, failing IT systems can result in substantial financial losses for a company and its customers.

As a result, companies are increasingly confronted with the increasing demands of their customers as well as the legislature, banks and insurance companies for data protection and information security. Many customers also make their decision for a company dependent on the use of an effective data protection and information security management system.

Under the Federal Data Protection Act (BDSG), companies are obliged to ensure the proper processing of personal data.

Klöcker - Your external data protection officer

The Federal Data Protection Act stipulates that a company in which more than nine employees are entrusted with the processing of personal data has one Data protection officers. Our services as external data protection officer include:

- Conception and implementation of data protection measures
- Organization of employee training on data protection and IT security
- Check compliance with data protection regulations
- Create a public procedure directory
- Consultation and pre-measures for the installation of new procedures and systems

Kück - Your external IT Security Officer

As an IT security officer, a specialist deals with everything related to IT security. Therefore, it is useful to include it in projects with an IT focus. Our services as an external IT security officer include:

- Regulation of the IT security process
- Coordination in the implementation of security policies and IT system security policies
- Development of an IT security and emergency preparedness concept
- Check compliance with IT security measures
- Creation of safety reports for the management
- Arrangement of awareness and training measures for employees

More safety thanks to combined protection

Optimize resources and create free spaces

Data protection and security objectives must be clearly defined, controlled and constantly promoted. A lack of resources often causes companies to neglect these processes, making them legally vulnerable to financial risk. With the support of an external specialist, you can benefit from the following benefits:

- Evaluation of your safety measures by independent Experts
- Realistic cost calculation
- Minimize their privacy and security gaps
- Constantly updated expertise
- Saving of own resources
- The impact of synergy in data protection and IT security
